

# Full life cycle conservation is mission critical for migratory birds.

3 billion birds lost since 1970

Stopover and winter Habitats are disappearing

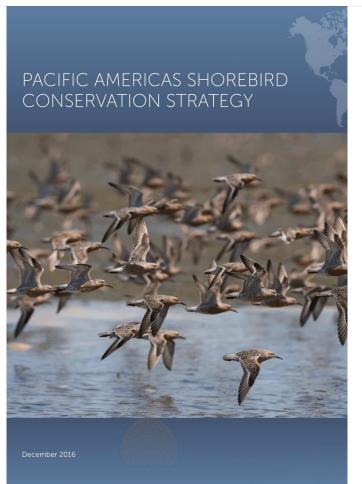

# **Pacific Americas Shorebird Conservation Initiative**

#### Pacific Plan

- Canada to Chile
- 93 public/private partners engaged
- 30 countries
- 1/5 (33) of 170 sites identified in Chile

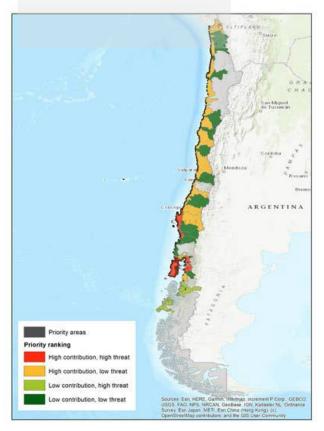

## **Our Conservation Approach**

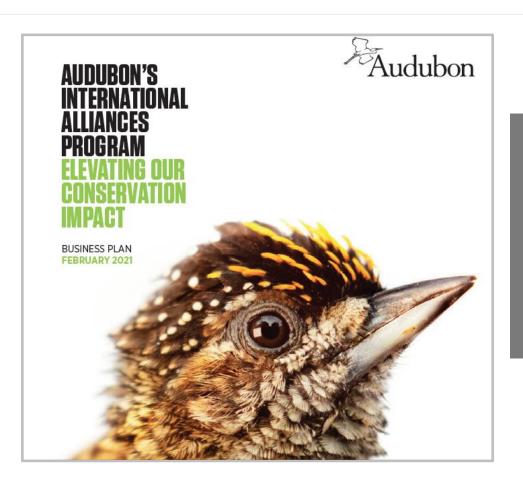

#### Chile

- Potential for scalability and high impact across land and seascapes
- Portfolio aligns with national economic and development goals
- Builds and supports local needs and organizations
- Consistency with Audubon's U.S. strategy but tailored to LAC
- Enhances Audubon's value proposition

#### **Priority areas**

#### **Strategy Portfolio**

- **1. Conserva Aves:** National and Subnational Protected Areas
- Working Lands
- **3.** Coastal Resilience
- Building a Constituency for Birds

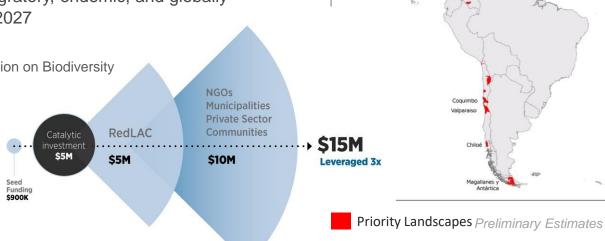

#### 1. Conserva Aves

Create economic and technical incentives supporting declaration of 80 to 100 subnational protected areas—totaling 1.3–2.0 million hectares of habitat important for migratory, endemic, and globally threatened birds in **5 countries** by 2027

- Leverage momentum of 30 x 30 Convention on Biodiversity
- Deliver conservation impact at scale
- Foster long-term sustainability

Chiloé

#### 2. Working Lands: Regenerative Agriculture

#### Customize-for-birds and scaleup, proven sustainable models in Colombia as pilot for Latin America

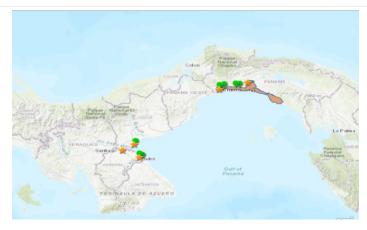

- Standardize operating models (by commodity, starting with sustainable cattle ranching)
- Playbook development
- Pilot case in Colombia
- Capacity & training facility in place
- Policy and economic incentives in place
- Large scale projects
- Replication to other countries

#### 3. Coastal Resilience

# Encourage smarter development and preserve the valuable services that intact coastal ecosystems provide

- Standardize operating models (by sector, starting with development -- roads & sanitation)
- Playbook development
- Pilot case in Panama
- Policy and economic incentives in place
- Large-scale projects
- Collaborating with GEF 6 Coastal wetlands project in Chile

Demonstration Project: Panama (\$3M - 3-year project)

- Goal: Elevate the importance of Natural Capital by the country.
- Two locations
  - Panama Bay (2-3M shorebirds annually)
  - Parita Bay (30% Wilson's Plover)

#### 4. Building a Constituency for Birds

#### **Challenges/Opportunities**

- Bird awareness and interest across LAC is growing exponentially
- Migratory birds are not well represented in major conservation initiatives or development plans
- Coordinated advocacy for birds and the environment is very limited
- Local conservation and indigenous groups are often marginalized from decision making
- Bird-based tourism as sustainable livelihoods

### **Chile Program**

## Conservation actions and planning

- Land purchase and conservation easements
- Creation of municipal reserves
- Conservation action plans
- Adaptive management

## **Sustainable livelihoods** and socioeconomic tools

- Best management practices
- Bird-based tourism
- Natural capital and ecosystem services

# Integrating shorebirds into the national conservation agenda

- MOU with Ministry of Environment
- Supporting and advisory role: National Wetlands Protection Plan and National Biodiversity Strategy
- Project implementation and capacity building at key coastal wetland sites in collaboration with Ministry of Environment

Our work
focuses on the
most important
stopover and
wintering sites for
migratory
shorebirds.

Goal: 28,000 acres influenced

2,653 mi.

Coastline: 3,999 mi.

#### **Recommendations**

- National Bird Conservation Strategy implementation
- Improve seabird knowledge base
- Integrate shorebirds and seabirds with MPA planning and development
- Leverage new conservation tools:
   DRC, urban wetland law
- Development of conservation financing mechanisms
- Migratory bird bilateral agreement
